

AFTERGLOW

Daily User Guide

A short operating guide for your MOPAS productivity workspace, daily routine, document tracking, tender work, creative study, and End Day Review.

Morning discipline

Start at 6:00 AM, complete routine tasks, and choose your top 3 priorities before work.

MOPAS execution

Use the Dashboard to focus on urgent tenders, follow-ups, document expiry, and operational work.

Creative growth

Protect evening time for DrawingBox, 43 Project, AFTERGLOW brand work, and portfolio progress.

Close the day

Use End Day Review to save the report, move normal unfinished tasks, and prepare tomorrow.

Daily rule: open the Dashboard first, finish the current priority, record important work, and close the day properly.

1. Daily Workflow

Use AFTERGLOW as a daily control center. The goal is not to fill the app with too much information. The goal is to know exactly what matters today, what is late, what is urgent, and what must be prepared for tomorrow.

Time	What to do	Where in the app
Morning	Open Dashboard, check Today Focus, complete Wake up, Read 20 pages, and Morning workout routine tasks.	Dashboard + Daily Schedule
Before work	Choose top 3 tasks for the day. Give priority to overdue, due today, urgent MOPAS work, and document expiry alerts.	Today Focus / Priority Actions
Workday	Work on tenders, proposals, follow-up, operations, and company tasks. Update status as To Do, In Progress, Done, or Blocked.	MOPAS Operations + Task List
Documents	Upload or record important company documents and expiry dates. Watch Expired and Expiring Soon alerts.	Documents + Dashboard Alerts
Evening	Complete DrawingBox study, 43 Project / creative study, AFTERGLOW brand work, and money review.	Daily Schedule + Routine Tasks
Night	Open End Day Review, save notes, move unfinished normal tasks to tomorrow, and generate tomorrow routine tasks.	End Day Review

2. Dashboard - What to Check First

Due Today Tasks that must be handled today.	Routine Progress Your daily discipline score for the day.
Urgent Open High-pressure tasks that need immediate action.	Overdue Late tasks that must be recovered.
Expired Documents Documents that are no longer valid.	Expiring Soon Documents Documents to renew before they create tender problems.

When the Dashboard feels busy, focus only on this order: overdue first, urgent second, due today third, routine discipline fourth, document expiry fifth.

3. Daily Schedule Timeline

The Daily Schedule shows the current block, the next block, completed time blocks, and remaining blocks. Use Show Full Schedule only when you need the complete day view.

06:00 - 06:10	Wake up, drink water, make bed
06:10 - 06:50	Read 20 pages
06:50 - 07:20	Morning workout / mobility
08:45 - 17:00	MOPAS work: tenders, follow-up, operations
20:00 - 21:00	DrawingBox study
21:00 - 22:00	43 Project / creative study
22:00 - 22:45	AFTERGLOW brand work or portfolio
22:45 - 23:00	Money review, daily reflection, sleep preparation

4. How to Use Each Main Area

Area	Use it for	Daily habit
Tasks	Create work, personal, MOPAS, health, money, and creative tasks.	Update status every time you move work forward.
Board View	See tasks by status and manage workload visually.	Move blocked tasks quickly so you know what needs help.
Calendar	View deadlines across the month.	Add due dates to important tasks so the calendar becomes useful.
Documents	Track documents, uploads, and expiry dates.	Record expiry dates for RRA, RSSB, certificates, contracts, and admin files.
Daily Report	Record what was done for MOPAS and important follow-up.	Write short notes at the end of the workday.
Tender Folder Creator	Create a clean local folder structure for tender preparation.	Use it when a new tender is added or started.
Personal Projects	Track AFTERGLOW, DrawingBox, 43 Project, portfolio, and growth work.	Protect evening progress even when MOPAS work is busy.
End Day Review	Close the day, save notes, move normal unfinished tasks, and prepare tomorrow.	Use it every night before sleeping.

5. MOPAS Tender Work Method

For each tender, create one main task and break it into checklist steps. Add deadline, priority, tender title, required documents, missing documents, technical proposal, financial offer, and submission status.

1. Create a task in MOPAS Operations with the tender title.
2. Set the correct deadline and mark priority as Urgent or High.

3. Add checklist items: admin documents, technical proposal, financial offer, references, compliance table, and final submission.
4. Use the tender folder creator to prepare local folders before documents become scattered.
5. Move the task to In Progress while working and Done only after submission is complete.

6. Document Expiry Discipline

The document expiry system is important for tenders. Add expiry dates for tax clearance, RSSB, RDB documents, certificates, licenses, contracts, and any document that can block submission.

Status	Meaning	Action
Expired	The document date has passed.	Renew immediately before using it in a tender.
Expiring soon	The document is close to expiry.	Start renewal early and avoid last-minute pressure.
Valid	The document is still usable.	Keep it organized and ready for submission.

8. Simple Daily Rules

Do not overload the Dashboard.

Use it as a control center, not as a full report page.

Every important task needs a due date.

Without due dates, the Calendar and alerts cannot help you.

Routine tasks are daily discipline records.

Do not move missed routine tasks. Let them show the truth of the day.

MOPAS urgent work comes first during work hours.

Tender deadlines, follow-up, and document expiry are priority.

Creative work must still happen at night.

Small daily progress builds AFTERGLOW, DrawingBox, and the 43 Project.

Close the day before sleeping.

End Day Review is the system that prepares tomorrow.

9. Best Daily Closing Note Format

Completed: What did I finish today?

Missed: What did I fail to do?

Blocked: What needs help or a decision?

Tomorrow focus: What are the top 3 actions tomorrow?

Discipline score: How well did I follow the routine?

Remember: AFTERGLOW works when you update it daily. Small honest updates beat a perfect system that is not used.
